

Recommended Power-Packed Problem Statements

These are designed to grab the jury's attention and satisfy the "societal trends + actionable insights" requirement:

1. **"Phantom Inclusion in Aadhaar"**

Enrollment numbers suggest near-universal coverage, but biometric and demographic update patterns reveal gaps where identity exists on paper but is unusable in reality.

Why jury loves it: New term, clear societal impact, data-driven.

2. **"Aadhaar Update Inequality: Who Gets Left Behind?"**

Analysis of demographic and biometric updates shows uneven participation by age, region, and gender, highlighting areas where identity services are not reaching everyone effectively.

Why jury loves it: Social equity angle + actionable insights for policy.

3. **"The Forgotten 0–5 Age Group"**

Enrollment is high, but children under 5 show extremely low follow-up updates, risking future authentication failures as they grow older.

Why jury loves it: Focus on early-life inclusion—a concrete, visualizable trend.

4. **"Identity Aging Crisis"**

Biometric updates show that children and older adults frequently fail revalidation, threatening continued usability of Aadhaar for essential

services.

Why jury loves it: Predictive, problem-focused, visually striking (age vs update graphs).

5. “Peak Month Anomalies & Resource Misallocation”

Enrollment spikes in certain months indicate system overload and regional inefficiencies. Insights can help optimize enrollment centers and staff allocation.

Why jury loves it: Operational insight + clear admin benefit.

Tools & Visualisation Approach

Perfect for these insights. Use:

- Line charts → enrolment trends over months
- Heatmaps → update density by state/district
- Bar charts → age/gender distribution of updates
- Scatter plots → anomalies (e.g., low updates vs high enrolment)
- KPI cards → highlight key problem metrics (e.g., % of children under 5 updated, % of failed biometric revalidation)
- **Interactive dashboards** – Helps jury quickly see trends. Use slicers for **Year / State / Age Group**.

Best Consolidated Problem Statement

“Phantom Inclusion & Unequal Aadhaar Usability Across India”

While Aadhaar enrolment numbers suggest near-universal coverage, deeper analysis reveals significant gaps in demographic and biometric updates. Children under 5, older adults, and certain regions show low follow-up activity, risking unusable identities and future authentication failures. Monthly enrolment spikes highlight system inefficiencies, pointing to resource misallocation and operational bottlenecks. This study uncovers hidden patterns of “phantom inclusion,” identifies who is left behind, and provides actionable insights to improve accessibility, equity, and system performance across the nation.
